Professional Summary

QA Functional & Automation professional with 2+ years of experience testing web, mobile, Android, iOS, and tablet applications in agile and international environments. Skilled in functional testing, API validation, database checks, regression, smoke, integration, exploratory testing, basic accessibility, and automation maintenance with Playwright + TypeScript.

I combine QA technical knowledge, risk-based testing, and AI-assisted workflows using Cursor, MCP tools, and AI to improve test coverage, requirement analysis, bug reporting, assisted validations, and QA efficiency.

Work Experience

DualBoot Partners

Role: QA Functional & Automation

Modality: Remote – Uruguay

Period: Jun 2025 – Present

QA Functional & Automation in a software factory environment, working across web, healthcare, iOS, Android, and tablet-based projects. Currently validating a web platform integrated with connected mobile applications across phones and tablets.

Responsibilities:

- Analyze user stories, acceptance criteria, business rules, risks, and edge cases.
- Execute functional, smoke, regression, integration, exploratory, API, mobile, tablet, and responsiveness testing.
- Validate APIs, database behavior, UI flows, integrations, and cross-device scenarios.
- Report, document, track, and validate defects through the full QA cycle.
- Maintain and update automated tests as features, flows, or selectors evolve.
- Use AI-assisted workflows to support analysis, test coverage, bug reporting, assisted validations, and basic debugging.
- Collaborate with international teams in English within agile methodologies.

Tools & Technologies:

Azure DevOps, Jira, Swagger, Postman, Azure Data Studio, BrowserStack, DevTools, Lighthouse, WAVE, Playwright, TypeScript, Cursor, MCP tools, AI-Assisted QA, Jam, Excel, Slack.

ANF AC – Certification Authority

Role: Software Tester

Modality: Remote – Spain

Period: Nov 2023 – Jun 2025

Software Tester for multiple interconnected internal web applications, validating end-to-end workflows, integrations, API endpoints, and responsive web behavior.

Responsibilities:

- Analyze requirements and validate expected behavior across dependent web applications.
- Design and execute functional, smoke, regression, exploratory, and integration tests.
- Test API endpoints, validating responses, business rules, and data consistency.
- Detect, report, and track defects until resolution and closure.
- Validate responsive web behavior for mobile views.
- Maintain QA documentation, endpoint collections, and test suites updated.
- Participate in team synchronization meetings and collaborative QA activities.

Tools & Technologies:

Redmine, Postman, DevTools, Excel, browser plugins, Google Chat.
